Update your DNS records

This article applies to the Classic system only

How do I update my DNS?

You will need to create 2 DNS records or have your domain provider create them for you:

- Create or edit a CNAME record for 'www' as **classic.websites.mygameday.app.**
- Remove reference to the A record if pointing to 202.59.54.203

What if I do not have access to update these details?

If you do not manage your own DNS, you should contact your domain provider. If you are unsure who this is, please visit https://whois.com.au/whois/ and type your URL into the search box. The registration details will then show who is managing the domain.

Where do I input my URL that I have purchased?
