Merge Fields for Email Databases

Last Modified on 25/07/2017 4:35 pm AEST

The email databases will be able to use Merge Fields as you can in other areas of the system however the list of available merge fields is significantly less

The merge fields are directly related to the file that you used to append members to the database itself

These Merge Fields are

FIRSTNAME

LASTNAME

COMPANYNAME

The merge fields will work in both the subject line and the body of the email
