

Dashboard: General Website Settings

Last Modified on 16/12/2024 2:20 pm AEDT

Under 'General Website Settings' admins can establish global settings that apply across the entire site including the site title that appears in browser tabs, a GA-4 Google Analytics tag, and the background and text colours for display on the website.

SITE TITLE

This is the title of the website that will appear when searching via a search engine within a web browser as well as appear as the tab name in a browser.

Site title

Your site title will appear in the top of the web browser or tab

LOGO

This is the logo that will appear in the top left hand corner of the website along the header.

Recommended max width is 300px. Max height should be 100px. If you have a square logo make it 100x100 and it will be centered within the logo display area on your site.

Logo

The website will display a max width of 300px and max height of 100px centered within an area in the top left of the website.

Recommend image size of 100x100 or 300x100

COLOURS

Here you set the background, button and text colours that will appear in the header, footer and buttons of your website. It will be best to make sure the colours you use contrast to give your website the best display. You can use a [contrast checker](#) to check the colours you want to use will work with each other.

The Background Colour applies to the header and footer of your website, and the Text Colour applies to the text within the header and footer.

Background Colour

This colour will be used as the background to customise your website.

Text Colour

This colour will be used for text that appears on your custom background colour. Hint: make sure they contrast.

Button Colour

This colour will be used for links and buttons.

Button Text

This colour will be used for button text.

CUSTOM CSS

If your organisation has it's own colours, customisations etc it wishes to have you can input this custom CSS here. Get in touch with us for assistance.

Custom CSS

Need to do a bit more customisation? Add you css here.

```
#section-home-video-panel .banner-content {
  background-color: rgba(0, 0, 0, 0);
}
#footer #global-footer {
  background: #af4afe;
}
#footer {background-color: #af4afe;}

#footer #footer-main .container .footer-menu .menu li a, #footer #footer-main .container .footer-content .menu li a {
  color: #ffffff;
```
