

Successfully integrate ECAL into my GameDay website

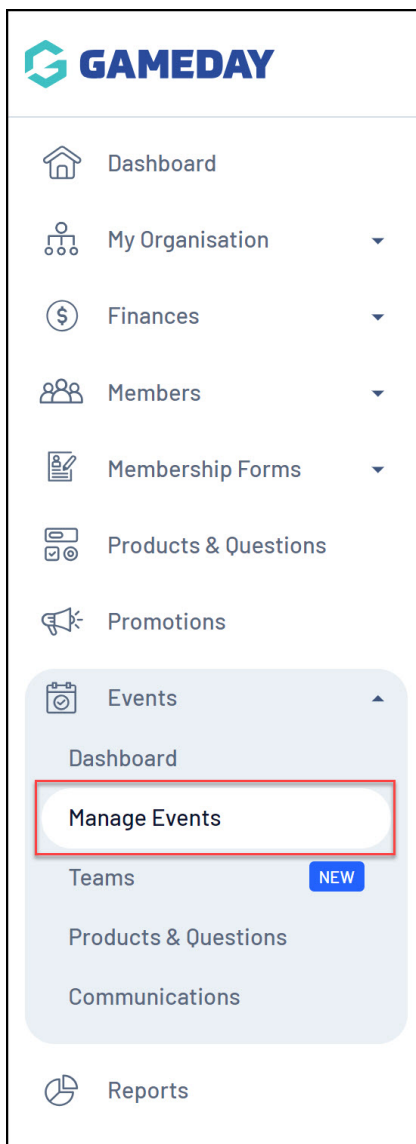

Last Modified on 16/12/2024 2:39 pm AEDT

Note: This process only applies to organisation that use GameDay Events AND have a Stack Commerce Website

As a [GameDay Events](#) user who also has a Stack Commerce [Website](#), you can use the integrated ECAL functionality available in your GameDay Events database to integrate a calendar widget into your website as a way of publishing your event schedule online.

To integrate ECAL into your Stack Commerce Website:

1. Log into your GameDay database and click **Events > MANAGE EVENTS** in the left-hand menu

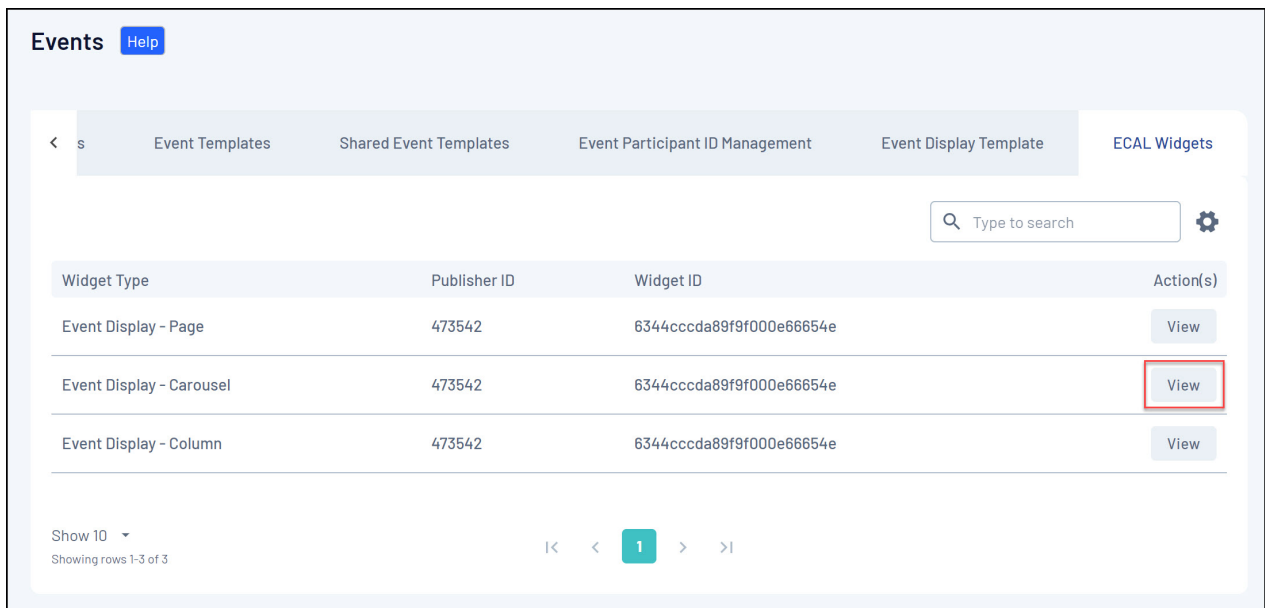

2. Click the **ECAL WIDGETS** tab

3. Click **VIEW** next to the relevant widget you wish to use

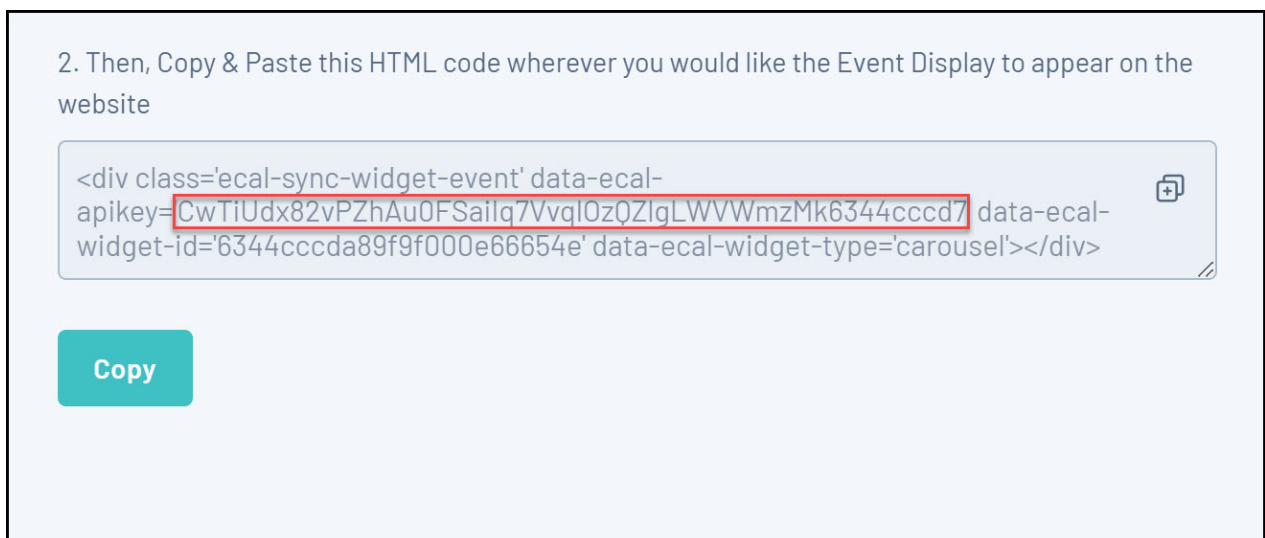

Note: Stack Commerce Websites only allow a Carousel or Column event display

4. On the **WEBSITE** tab, you can copy the codes to insert into your website. The information you need can be found in the second box of this display.

You will need to copy and note down the following:

API Key

Widget ID

2. Then, Copy & Paste this HTML code wherever you would like the Event Display to appear on the website

```
<div class='ecal-sync-widget-event' data-ecal-apikey='CwTiUdx82vPZhAu0FSailq7Vvql0zQZlgLWVWmzMk6344cccd7' data-ecal-widget-id='6344cccd89f9f000e66654e' data-ecal-widget-type='carousel'></div>
```

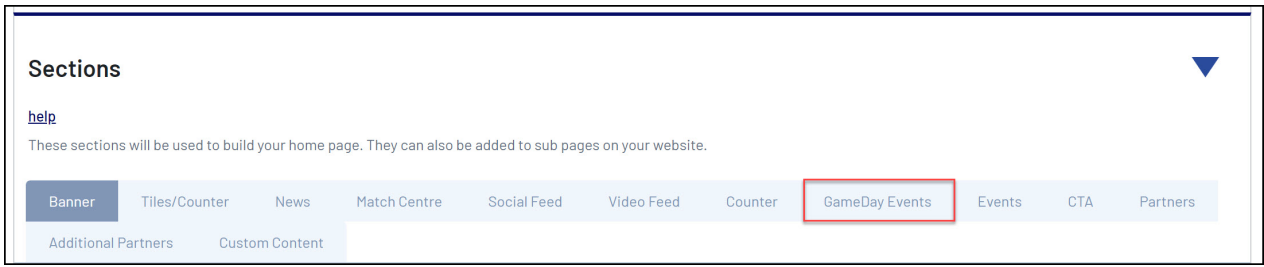

Copy

Note: If you are using a third-party website, steps 1-4 will remain the same; however, when integrating into your external website, you will need to copy and paste the whole code from box 1 into the head of your website, and then copy and paste the whole code from box 2 into the page etc of where you want your events to display. For more information on this process, [click here](#).

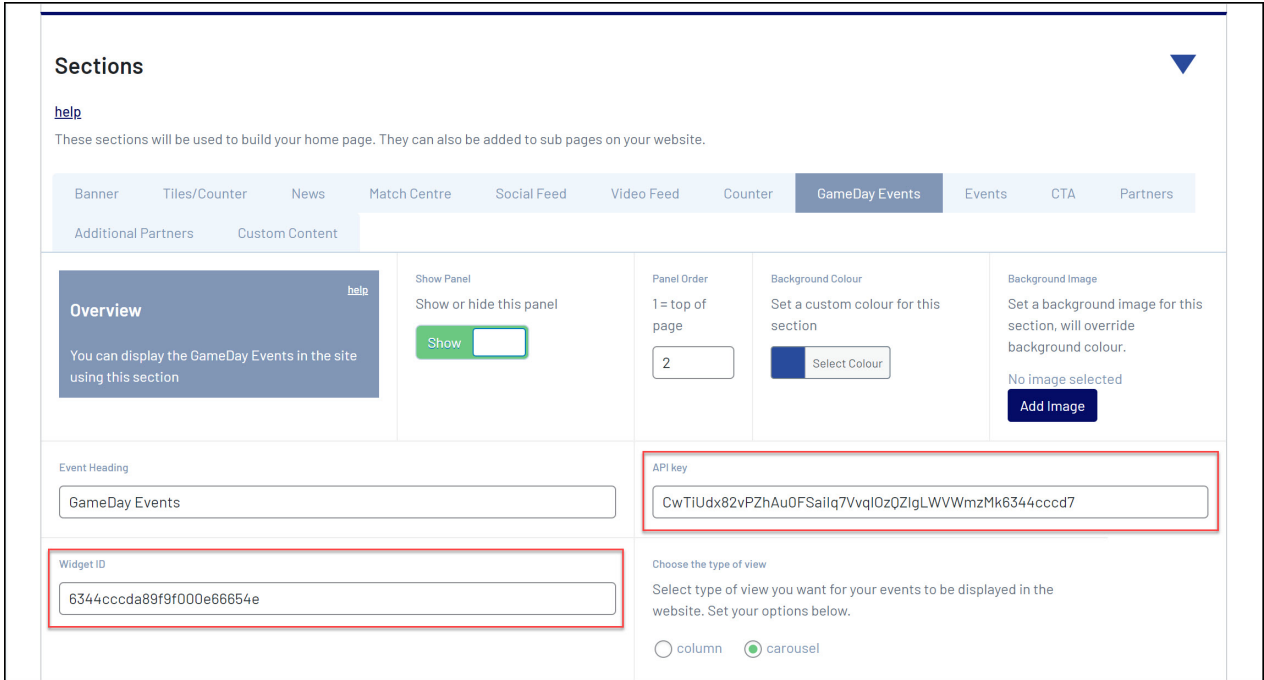

5. Login to your Stack Commerce Website and open the **SECTIONS** option

The screenshot shows the 'Website Setup' interface. On the right side, there are 'Publish' and 'Update' buttons. The main content area lists four website features: 'Your Website Features', 'Header', 'Sections', and 'Footer'. Each feature has a 'help' link and a brief description. The 'Sections' feature is highlighted with a red box around its right-pointing arrow icon. The descriptions are: 'Your Website Features: Overview of your website feature settings.', 'Header: Manager your website header, navigation and colours.', 'Sections: These sections will be used to build your home page. They can also be added to sub pages on your website.', and 'Footer: The footer appears on the bottom of the page across your website. I contains four columns which you can add content to.'

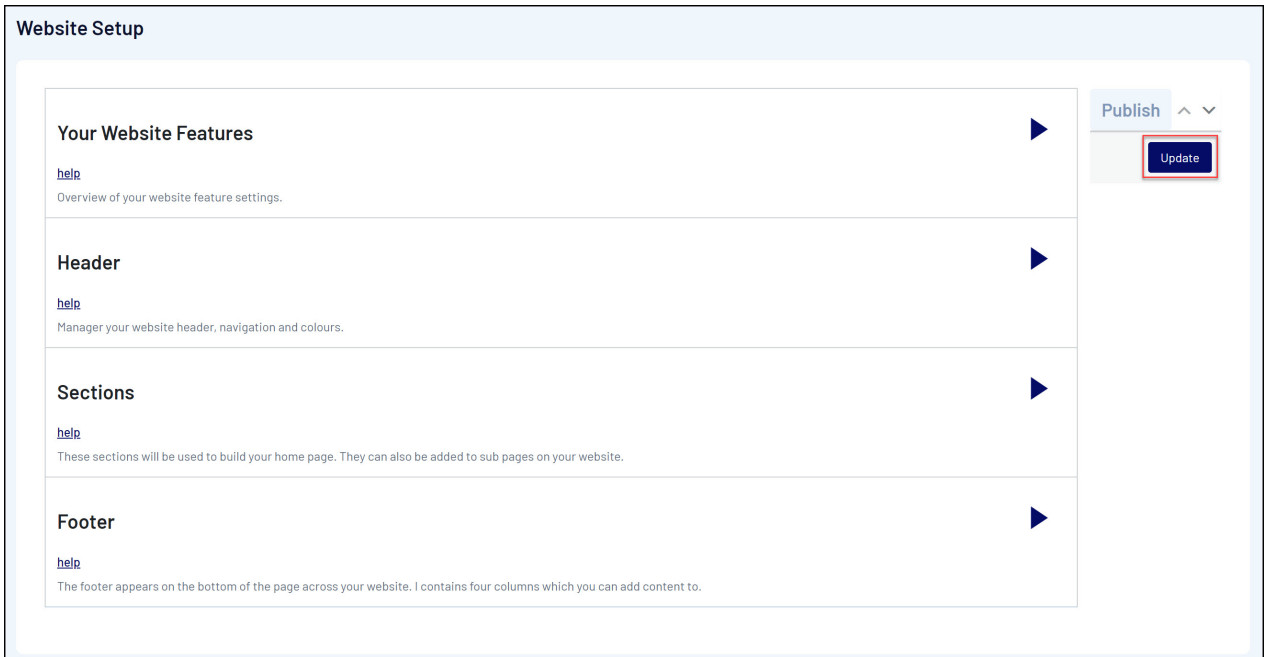

6. Click the **GAMEDAY EVENTS** tab

7. Paste the API Key and Widget ID in the relevant fields

8. Scroll back to the top of the page and click **UPDATE**

Any events from your GameDay database will then feed onto your website:
