

Events

Last Modified on 12/02/2025 2:28 pm AEDT

The Events tab makes use of a WordPress plugin to deliver Events. There is also an option to use our GameDay Events platform, and eCal to have event data fed to your website.

1. Under the **SECTIONS** header click on the **EVENTS** tab.
2. If this panel is not set to show on your website yet, then make sure you **click the button to SHOW** this widget on your website and **adjust the order** of where you would like this to sit within your website.
3. You can also add a specific background colour transparency or image for this panel.

The screenshot shows the 'Events' configuration panel in a WordPress dashboard. The panel is titled 'Overview' and includes a 'HELP' link. Below the title, there is a description: 'This section uses events to be created using Events Calendar'. The panel is currently set to 'Show' and is at 'Panel Order 1' of 99. The 'Background Type' is set to 'Colour'. The 'Background Colour' is set to a blue color. The 'Background Image' is set to 'No image selected'. The 'Event Heading' is set to 'PRO - Events'. The 'Heading Colour' is set to a grey color. The 'Event More Link' is set to 'https://stackcommercepro.fspdev.com/events/'.
